Indoor Comfort

Enjoy Just-Right Warmth with the Amana[®] brand's AMH8 Furnace

With your Amana brand AMH8 Two-Stage Gas Valve, Multi-Speed Furnace with TwinComfort™ technology, you will enjoy indoor comfort that is not too hot, and not too cold — it's just right. Thanks to our TwinComfort technology, your Amana brand AMH8 performs like two furnaces in one: an energy-efficient, low-stage furnace for moderately cold days, and a heavy-duty, high-stage furnace for extremely cold ones. Plus, your AMH8 furnace will provide pleasant, even heating instead of the harsh, stop-and-go temperature swings of many single-stage furnaces. And like all of our Amana brand products, it's designed to last and last and last!

Our new TwinComfort technology enhances the comfort of your home by delivering just the right amount of heat to provide steady, even warmth. Unlike conventional, single-stage furnace technology, TwinComfort technology uses two heating stages. Your furnace starts out on the low stage, enabling a gradual and pleasant increase in the temperature of your home environment. And if low-stage heating doesn't warm your home to the desired temperature quickly enough, TwinComfort shifts your furnace into the high stage automatically to ensure your comfort.

In addition to providing smooth, even heating, the Amana brand AMH8 Two-Stage Gas Valve Furnace typically runs more quietly than single-stage furnaces. The AMH8 also helps to reduce the stagnant pockets of air that can form when the furnace stops running. Plus, the number of times the air in your home goes through your air filtration system will increase, providing yet another benefit of TwinComfort technology — improved air quality.

The Heart of your Amana Brand Furnace: Million-Air[®] Heat Exchanger

A furnace's most critical component is its heat exchanger, and our unique Million-Air, formed using our patented dual-diameter pipe and wrinkle-bend technologies, is built to last.

One of these heat exchangers has endured over two million extreme-temperature test cycles and is still going strong.

Energy-Efficient Performance

With today's energy prices, most new furnace buyers place a high priority on energy efficiency. A furnace's efficiency can primarily be determined by two factors: its AFUE rating (Annual Fuel Utilization Efficiency), which indicates what percentage of each dollar of natural gas purchased is actually used to heat your home, and the type of blower used in the furnace. Your new Amana brand AMH8 Furnace offers 80% AFUE. Compare this furnace to the typical 60% AFUE furnaces that are installed in many homes today, and you'll see the energy savings you'll enjoy for years to come.

Designed for Quiet Operation

With your Amana brand AMH8 Two-Stage Gas Valve Furnace, you can say goodbye to the rude awakenings that can occur with a noisy furnace. Because your AMH8 furnace typically operates in low stage the majority of the time, it produces less of the normal high-fire sound produced by single-stage furnaces. And to make your AMH8 even quieter, we fully insulate the furnace cabinet.

SureStart[®] Ignition System

A long-lasting Silicon Nitride Igniter is the heart of the Amana brand furnace's SureStart ignition system.

Rugged Construction that is Built to Last

Your Amana® brand AMH8 Furnace's cabinet is built using high-quality, leather grain-textured, post-painted steel to resist rust and corrosion. Its elegant design and attractive two-tone Architectural Gray and Executive Gray color scheme complement other Amana brand heating and cooling equipment. And if you choose to add to your system, the furnace has terminals for both an electronic air cleaner and a humidifier.
